

3rd Generation Biological Catalyst and Preservative for Forage Crops including Maize, Wholecrop and Grass/Pasture.

enSILE-Bio™ RTU

promotes faster ensiling at lower temperatures through its unique “substrate succession” process. The process protects valuable energy and protein, and inhibits spoilage organisms so your silage is ready earlier, stable and highly palatable.

Features

- Ready-To-Use formulation
- Low volume liquid application
- Heat stable – long shelf life
- Active yeasts and heterotrophic microbes
- Long Term Fermentation Extracts
- Naturally catalyses ensiling microbe activity
- Low temperature fermentation
- Versatile – 1 product for all forage material
- Australian made and owned

Benefits

- No premixing required
- No refrigeration required
- Long shelf life: 5 years
- Long tank mix life: 14+ days
- Consistent quality silage
- More energy retained
- Less protein degraded
- Reduces spoilage
- Reduces product wastage
- Reduces ensiling period
(Feed after 28 days of ensiling)

enSILE-Bio™ RTU

A game-changer. Developed to accelerate the ensiling process using “continuous substrate management” principles. Its mechanism is vastly different to other silage inoculants in that it facilitates the ensiling process in a seamless, sequential, substrate dependent manner (sugar to alcohol to lactic acid). By catalysing (stimulating) a natural sequence of biological reactions, enSILE-Bio™ RTU promotes low temperature fermentation of your feed which results in: reducing the ensiling period, less heat production, more energy retained, and less protein degraded.

“GETTING
THE VERY
BEST FROM
HOME GROWN
SILAGE”

LIQUID APPLICATION:

50mL per wet tonne. Each 5L treats 100 wet tonnes. Dilute product into holding tank for crop application. Evenly spread as a fine mist to green cut material. Dilution rates can be modified to suit moisture content on target material. Long tank mix life: 14+ days (product stable when mixed).

STORAGE:

Store in a shaded place until ready to use. **DO NOT SHAKE.** Keep container closed and free of debris when not in use. No Refrigeration Required.

4Sight are committed to regenerative agriculture and sustainable solutions whether at home, in the local community or on-farm in regional Australia. 4Sight has the tools and technical knowhow to restore soils and improve productivity utilising organic waste on-farm, supported by additional microbial catalysts for silage, effluent and feed providing a wholistic, holistic approach to soil regeneration. 4Sight's mission is to help Australian farmers regenerate their soils, improve farm productivity, improve on-farm livelihoods and improve people's well-being.
